911EP® Millennium Light Bars Pass SAE and Title 13 Standards

(ST. CLOUD, Minn.) – 911EP®, a subsidiary of Armor Holdings, has received approval for its Millennium light bars from the California Code of Regulations Title 13 as well as three Society of Automotive Engineers (SAE) Standards. SAE is the recognized industry resource for technical information and expertise used in advancing the engineering of mobility systems. The Title 13 approval will allow increased market penetration in the state of California. Calcoast Laboratories, one of the foremost, full service, independent materials testing labs in the U.S conducted the tests.

Millennium Light Bars were found to meet the following SAE standards:

1. **J595** - Flashing Warning Lamps for Authorized Emergency, Maintenance and Service Vehicles
2. **J1318** - Gaseous Discharge Warning Lamp for Authorized Emergency, Maintenance, and Service Vehicles
3. **J845** - Optical Warning Devices for Authorized Emergency, Maintenance, and Service Vehicles

“Receiving the SAE and Title 13 approvals validates the work we’ve been doing to move 911EP® forward” says Rich Shafer, General Manager, 911EP®. “Since Armor Holdings acquired the business in October of last year, we have made great strides in product improvements and product development. Look for many exciting developments from us in the near future.”

ABOUT 911EP®

In October 2002, Armor Holdings, Inc. acquired 911EP®, a leading manufacturer of emergency lighting products using LED technology for law enforcement, military and security markets. Located in St. Cloud, Minnesota, 911EP® is the original creator of warning light systems using LED technology and is the leader in LED light technology.

The 911EP® patented technology consumes 70 percent less energy than the traditional strobe or halogen systems through the use of the vehicle’s existing 12-volt system – no additional power supply is needed. The lighting solutions created by 911EP® are extremely durable, bright and cool running with an illumination lifetime measured in years, not months. Light patterns are easily created through computer-controlled programming capabilities. Consider the 911EP solid-state design – no moving parts that might wear out or break down, no internal wiring that could break or be cut - and these products are the clear choice in undercover lighting solutions.

ABOUT ARMOR HOLDINGS

Armor Holdings, included in FORBES magazine's list of "200 Best Small Companies" in 2002, and a member of the S&P Small cap 600 Index, is a leading manufacturer of security products for law enforcement personnel around the world through its Armor Holdings Products division and is one of the world's largest and most experienced passenger vehicle armoring manufacturers through its Mobile Security division. Armor Holdings Products manufactures and sells a broad range of high-quality branded law enforcement equipment. Such products include ballistic resistant vests and tactical armor, less-lethal munitions, safety holsters, batons, anti-riot products and a variety of crime scene-related equipment, including narcotic identification kits. Armor Holdings Mobile Security, through its Commercial Products division, armors a variety of vehicles, including limousines, sedans, sport utility vehicles, and money transport vehicles, to protect against varying degrees of ballistic and blast threats. Through its Military Products division, it is the prime contractor to the U.S. Military for the supply of armoring and blast protection for High Mobility Multi-purpose Wheeled Vehicles, commonly known as HMMWVs.
